## Archival Folders &

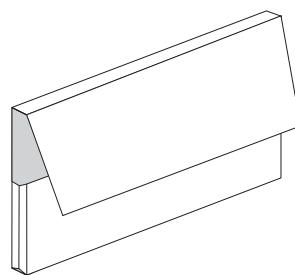

Our range of buffered white archival folders are made from NAA-approved folder board and also meets the PROV standards for long term storage. For A4 and foolscap documents, choose the economical manilla folder, or where a more secure housing is required, choose the half enclosed and fully enclosed Document Wallets. Very fragile papers can be safely stored in Four-Flap Folders where the documents are carefully lifted out, reducing the risk of further wear and tear. Oversized map folders and custom sizes are also available – minimum quantities apply.

## Perpetuum Wove &

Watermarked & NAA approved, our 90gsm & 120gsm Perpetuum Wove papers feature the NAA's Q-infinity trademark, making them readily identifiable as archival papers. 100% Australian-made, these papers are acid and lignin-free and alkaline buffered to neutralise acids that exist in original papers, packaging and the atmosphere. Perpetuum Wove meets stringent tear strength tests, making it suitable for the creation of permanent records. Larger rolls and sheets are ideal for interleaving, wrapping, envelope manufacture etc. Sheeting service available.

## Archival Tissues

Range of high quality archival tissues to suit a variety of preservation and repair applications.

The Light Impressions tissues pass the PAT making them safe for use with photographic material.

The heavier 45gsm tissues are watermarked for identification, with the buffered being suitable for interleaving and wrapping paper-based materials as such works on paper, books and documents.

The unbuffered 45gsm is suitable for interleaving and wrapping of photographic materials. The lighter weight 20gsm tissues are an economical alternative to the above tissues, and are ideal for textile storage (the unbuffered version is suitable for all textiles incl silk & wool).

Unbuffered Greens Lens Tissue (L tissue) is very soft, lightweight & long-fibered, making it ideal for wrapping delicate objects, textiles (incl silk & wool), as well as repairs to papers. Crompton Heat-set tissue is a long fibred repair tissue, coated on one side with an acrylic heat set adhesive. Almost invisible after application, heat-set tissue can be used for repairs, full lamination and hinging. Reversible with heat or mineral spirits. *At the time of manufacture, the unbuffered tissue ph value is between 6.8 & 7.2. Since the tissue is unbuffered, a drop in pH value is to be expected when exposed to normal atmospheric conditions*

## Polypropylene Binder & Slipcase Albums

Our attractive Australian-made binder & slipcases provide complete protection and easy access for document and photographic collections. Made of inert polypropylene, the binder & slipcase combination creates a dust and light proof storage system that safely houses documents and prints up to A2. The 3 ring binder accommodates our hole-punched polyester and polypropylene sleeves. Used in conjunction with hole-punched sleeves, archival card-supports and photo-corners, these binders safely and attractively protect a wide range of photographic material, ephemera and documents to produce a true archival scrapbook! Passes the PAT.

## Adhesives

Versatile range of adhesives suitable for various bookbinding, framing, conservation box making and repair applications. PVA and EVA adhesives dry clear, are reversible with water and do not brittle or discolour with age. Wheat starch adhesive is reversible with water and is a highly purified grade of starch used for traditional museum mounting, repair and creative work (must be cooked prior to use). Methyl Cellulose dissolves in water, dries clear, easily reversible in cold water, and is used for repairing tears, as a size and paint binder. Paraloid B72 adhesive is an ethyl methacrylate copolymer reversible with solvents, used as a general purpose object adhesive. Plextol B500 is commonly used as an adhesive for canvas lining and consolidation of special plasters.
